Satisfied customers

Smart Documents

Smart Documents is a document automation system. Acts as an integrated system that can be implemented as an innovation in your document workflow and thereby increase productivity. Easily create documents, including in Teams or SharePoint, and automatically save the finished document to the appropriate folder.

Document creation will reduce the time you spend on individual documents. Use smart templates to create forms, letters, approvals.

Almost all government agencies in the Netherlands use this system. The system works in the Netherlands, Germany and many other European countries.

Appreciate your time and resources. We can easily offer you a high-quality and reliable system, which our developers can fill with your business ideas, structure the information and implement to optimize your business.

Banking system

Armenian universal bank offering corporate, investment and retail banking services. Our team of developers has created a separate direction - a brokerage application for users.

The application we have developed has been a huge success in this direction. Our clients note the ease of use of the application, interesting design, and most importantly, they can share their findings with their family and friends.

Our developers took a very reverent approach to the creation and implementation of this project. Each function of the brokerage application is written using the best technologies and frameworks.

We value our users' time and resources, so we care about their safety. New technologies help to ensure the quality and confidentiality of the application.

Orders and Sales

Orders and Sales

Orders and Sales is a private cross-platform system designed for logistics and sales organizations of large companies. The platform has various integrations with various services and POS-terminals connected to the tax system.

You can easily connect to any of your systems, new intelligent features of artificial intelligence, which creates our developers. For the packaging of the modern high-tech business, more and more often our clients began to use the possibilities of artificial intelligence, so our team is ready to offer you any new development opportunities.

This is a great opportunity to support your wholesale business, make it better and more productive. After all, any business automation leads to huge wins and the highest results in your business niche.

Chipin.Games

"Chipin Games" - Crowdfunding platform for indie game developers. An opportunity to create a competitive and diverse game world, where every user can find a game project to his/her liking.

The platform unites hundreds and thousands of like-minded people in the sphere of games, development and new technologies, helps to achieve success even for the youngest developers, opens new, just made interesting games in different genres for all users. And the platform provides an opportunity to quickly communicate in communities and in person.

O.Kids

O.Kids is a mobile app created for parents and their children. The application allows users to connect to the playgrounds by scanning the Qr-code placed at each of the playgrounds.

The app helps parents control their child's time at the playground without constantly monitoring the time, and it helps the project increase the average bill.

Once connected to the playground, the user can pay for the services of the playground, monitor their child through the connection service to the available surveillance cameras located at the playgrounds, as well as communicate with the employees of the play space.

Royal Clark Enterprises inc.

At the moment we are conducting more than 10 projects and our team does not stop there. We are ready to cooperate with potential partners and clients.

Our company is ready to develop and package your idea and future product with the help of a team of professionals, create comfortable conditions for interaction and build business processes in the best way.
